# AUTO-MIDAS

**Make your Ride smart, safe & less stressful**

MOBILE APP

CLOUD

Elitia has introduced an IIOT Product for Manufacturing Sector together with SAP Labs Co-Innovation to unveil a connected Internet of Things (IoT) device for bikers. The product, called Auto - Midas connects with the inbuilt smart sensor of bikes and OBU's & shop floor data is sent to Elitia integrator. The Elitia integrator pushes the data to the cloud. Simultaneously the dealer portal data & SAP ECC data are fed to the cloud.

Auto- Midas enables the user to monitor & manage the vehicle health , provides On-road assistance . It also sends alert in case of any accident if the rider fails to respond within certain seconds and also users to access accurate location of bikes on the map with directions and speed details. It has the dynamic customer sync up with the dealer network.

- OBU's and Shopfloor data is sent to the Integrator. Integrator pushes the data to SAP HANA

- SAP ECC and Dealer portal data is fed directly to SAP HANA

Features

Remote check & Geo location

Anti - Theft

Remote diagnosis & support

Crash detection & Emergency call

Routes assistance

Advantages

Crash Sensor

sends alerts to your nearest contacts or the hospitals, when you are in an accident. It's built in such a way that your GPS co-ordinates and alerts are sent via a smartphone.

Fleet management

Allow users to track their vehicles in real time, reduce operative cost & protect personnel

Health monitoring

Real-time information on the utilization & health of fleet

User friendly Application

Fast and very easy to use tool, based on user experiences from people in the field. The Tracking & Tracing application is robust, flexible, easy to use.

Vehicle data history

Permanent knowledge of the whereabouts of the vehicles, now and in the past (default up to six months or more, but adjustable to clients needs)
